Got Chemicals?

Know what the hazards are?

Every department at the college has at least one chemical in their area. That chemical should have an MSDS (Material Safety Data Sheet) or SDS (Safety Data Sheet). This will show the composition of the chemical/product as well as the manufacturer, safety precautions and any hazards associated.

Clark College uses an online tracking system for our MSDS/SDS inventory. This can be found at the

[Environmental Health and Safety ClarkNet site](#) .

Once at the site choose the Safety link on the right side of the main screen.

If You have any questions about MSDS/SDS at the College, please contact [Environmental Health and Safety](#).

Don't learn safety by accident
